

Request for Reverberated Noise Profile

Panel Solutions, Inc. can provide a computer generated profile of the existing reverberated noise of a given environment and also requirements of a specific product to treat the environment to a pleasing level.

This form is provided as a outline to help in the design of your acoustical project requirements. Please provide Panel Solutions with as many details as possible about the project environment. The information will be confidential.

The reduction of excessive reverberant noise using acoustical panels and baffles may be estimated by calculation. The details necessary to provide for acoustical treatment of a given area are as follows:

1. The existing sound absorption coefficients for the room surfaces or the area to be treated. This includes wall, floor, ceiling sizes and the materials of which they are constructed.

Project Use:

Time Frame:

Wall details:

Floor details:

Ceiling details:

2. Establishment of the design requirements (noise level desired) for the room to be treated. This can be recommended from an industry standard or based on individual desires.
