1. Illustration Surface

2. Projection Screen

3. Wall Covering

— *All in one*

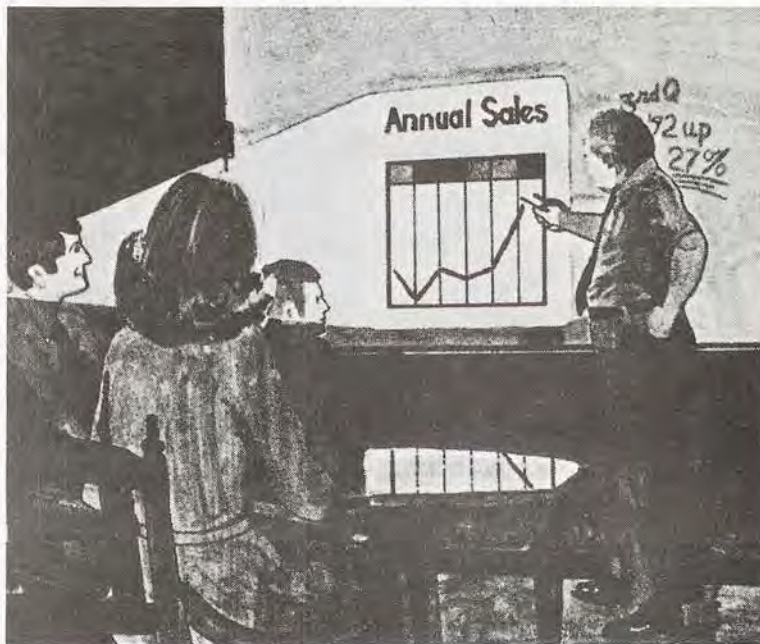

Panel Graphic visual aid surface can transform any wall into an economical communication center. Panel Graphic is used in industrial training schools, software teaching facilities, sales and service organizations, laboratories, meeting rooms and conference centers or *anywhere* a surface is desired upon which you can write or draw in color and project slides or overhead transparencies.

Panel Graphic will give you cleaner, sharper lines, better colors and legibility without the dust and mess of using chalk. A Panel Graphic visual display center... ready to help shape the ideas that will shape the 21st century.

Panel Graphic can be applied directly over old walls or chalkboards (surfaces must be smooth) or used as an original wall covering. A floor to ceiling Panel Graphic *wall* also makes an excellent information display surface that gives you greater productive use of your space.

PG 300 White

1

Panel Graphic as an illustration surface is easy to write and draw on in color. You can sketch, brainstorm, and group plan — return later make changes or start anew! Panel Graphic is excellent for areas that are designed as an operations room, a wall to display important projects, or just a more *flexible meeting room*.

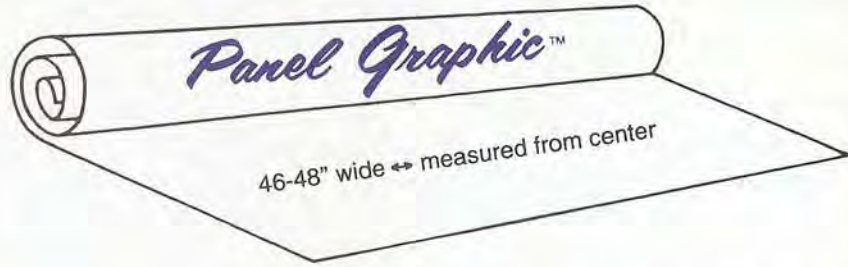

2

Panel Graphic with 'Project-Tech' image enhancement feature makes a superior surface as a projection screen. Panel Graphic 300 is an economical alternative for areas requiring an 'oversize' projection screen, or for technical companies requiring an illustration and projection surface or *communication wall*.

3

Panel Graphic is easy to clean. It is used in industrial training schools, meeting rooms, and lab facilities. Panel Graphic is economical and can save you up to 85% over conventional methods. Panel Graphic can serve you three ways, illustration or writing surface, projection screen and wall covering — *all in one*.

This unique visual aid product is manufactured with Project-Tech image enhancement surface. This feature produces a sharper image while providing an excellent illustration surface using a Panel Graphic Strater Kit which includes water soluble markers and cleaner.

ASTM E84-98 Class A

Sample representative allow for dye lot variation

SPECIFICATIONS:

Panel Graphic 300 White for application to walls, partitions, chalkboards, and dry smooth surfaces.

The writing surface for Wallcovering Industries, Inc. Panel Graphic shall be of composition that readily lends to the application of colored PG felt tip water soluble markers. Markings shall adhere with clarity, but remove easily and completely with Panel Graphic cleaning/erasure procedures. The surface shall be resistant to staining under normal conditions. Color retention of the Project-Tech surface shall be such as to present excellent projection screening for movies, slides and superimposings.

The installing contractor shall provide the end user with one (or more) PG 400 Starter Kit containing recommended markers, towels and spray cleaning fluid. Specifier shall advise end-user of Panel Graphic instructions for Use and Care.

APPLICATION:

Panel Graphic is a projection / illustration surface, before it is applied the installing contractor shall be sure that all surfaces are clean, dry, smooth and structurally sound. Follow carefully Panel Graphic installation instructions included in each roll.

Application procedures shall be the same as when applying vinyl wall covering except metal edged tools should not be used. Rubber, soft plastic or leather blades may be used as substitutes. Panel Graphic applied with metal tools will not be guaranteed. Panel Graphic shall be over-lapped 2-3 inches and double cut at the seams.

Adhesive shall produce strong enough bond to prevent blistering or delamination. Adhesives are Shur-Stik 111 or Dynamite 111, Evans 433. All excess adhesive shall be removed from the surface of Panel Graphic and any adjacent areas per instructions. After installation leave area clean.

Panel Graphic™

Instructions for USE and CARE

We recommend the purchase of a PG 400 Starter Kit when Panel Graphic is specified or installed. It contains a supply of approved water soluble markers (black, blue, green, red), wiping towels and Panel Graphic Spray Cleaner solution. Starter Kit PG 450 includes the above and a wall mount caddy that holds markers, cleaner and towels. These kits are available from our customer service.

The marks from PG felt tip water soluble pens can be removed using a spray bottle of Panel Graphic Cleaner. The cleaner lifts the pigment which can then be removed with a dry cleaning towel. While Panel Graphic is not dry rease, it provides a dual economical system for projection and illustration — a *visual aid surface that works.*

Panel Graphic can serve you three ways — an illustration or writing surface, projection screen, and wall covering — *all in one.* We recommend only the use of WI approved water soluble pens for Panel Graphic and will not guarantee our product if any other brand of marking pens are used.

We have solved visual aid problems for over 20 years, please call us about your requirements. Our Accessories include Cork for tack surfaces, Handi-Holder for print information, 2" Display Rail with map hooks, PG supplies and more. Call on **WI**.

Your Panel Graphic visual aid surface should provide many years of use with normal care. To discuss your project, call Jack Sanford.
